

How to launch QSS:

- Download the folder from the submission
- Extract the folder
- Open the folder in terminal/ cd into the directory where the jar file is (it's in the 22_group22_final folder) Your path to cd could look something like this:
`"C:\...\22_group22_final"`
- After you're in the correct directory, type the following "java -jar javaFXtest-1.0-SNAPSHOT-jar-with-dependencies.jar"
- If this doesn't work, you may need to open the code on IntelliJ, go to the Maven tab, go to the Lifecycle folder, double click clean, after this double click package and then do the last 2 steps again. If you are a Linux user, it may be slightly different.
- If this still doesn't work, you will need to run the Launcher.java in your IDE.

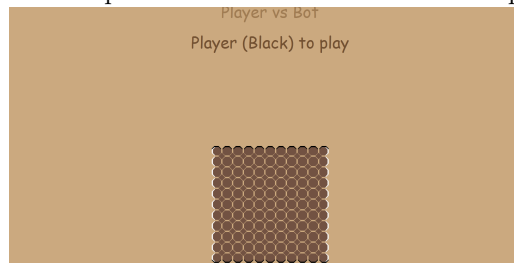

The JDK version for this project: openjdk-25 Oracle OpenJDK 25.0.2

How to play Quax:

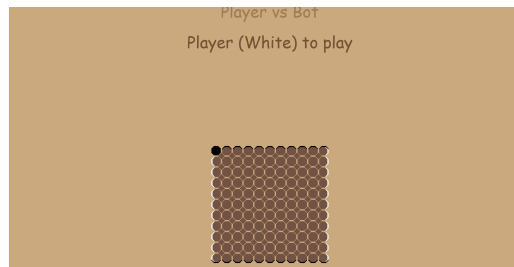

Upon launching, you will be on the title screen. You will be prompted to click the player vs bot gamemode.

When you do this, the board will open. At random it makes the first player either you or the bot.

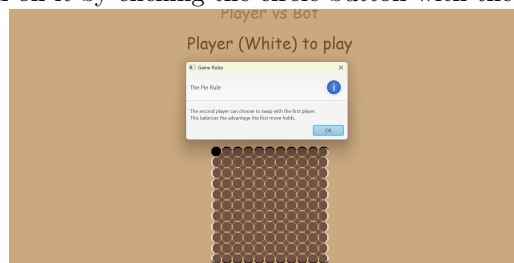

Player plays first here

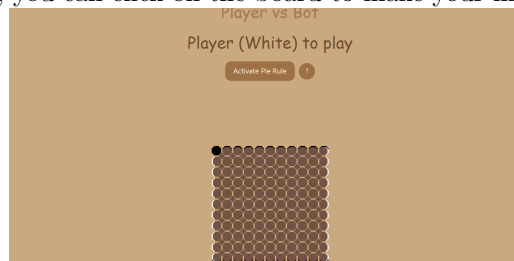

The bot plays first here

You can make a move by clicking on a tile

If the bot was first, after the first move, you will be prompted with the pie rule button, you can get more information on it by clicking the circle button with the question mark inside.

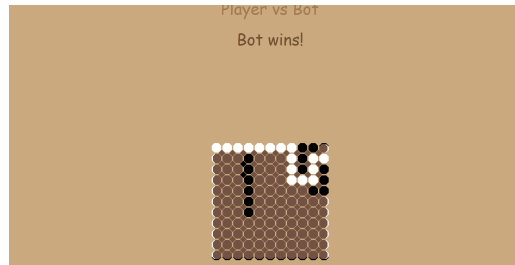

You can choose to activate it by pressing onto the "Activate pie rule" button. If you don't wish to, you can click on the board to make your move.

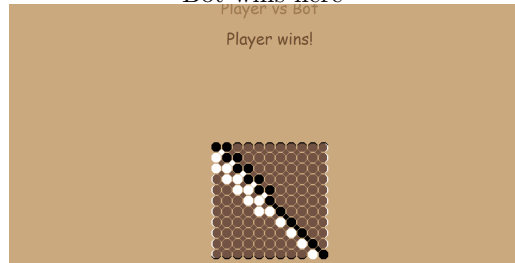

If you choose to activate pie rule, text will pop up and the player will now be black.

You can play the game and it can detect if you are winning whether that is the bot or the player.

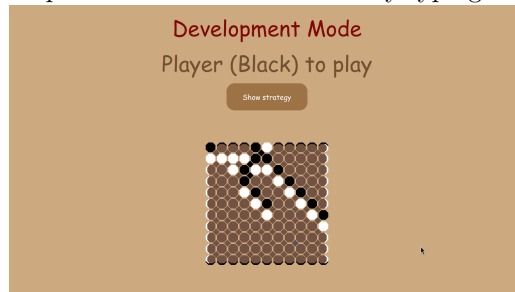

Bot wins here

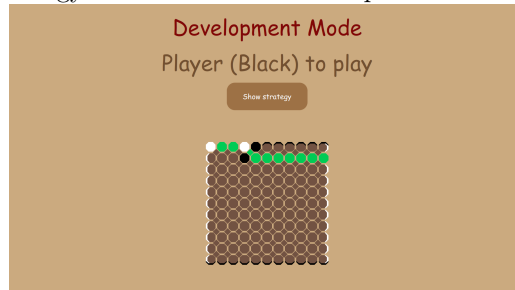

Player wins here

Developer mode can be turned on by typing "dev".

Developer mode activated

You can press the show strategy button to visualise the path the bot is taking to win the game.

Green tiles to denote the path in which the
bot is currently talking.

You can exit Developer mode by pressing the left arrow on your keyboard.

You can exit to the title screen on the board screen or you can close the application if on the title
screen if you press the escape button on your keyboard for 3 seconds.

How to play Quax:

The game is played on an 11 x 11 board.

The board consists of a grid made of octagons and diamonds (Rhombic grids)

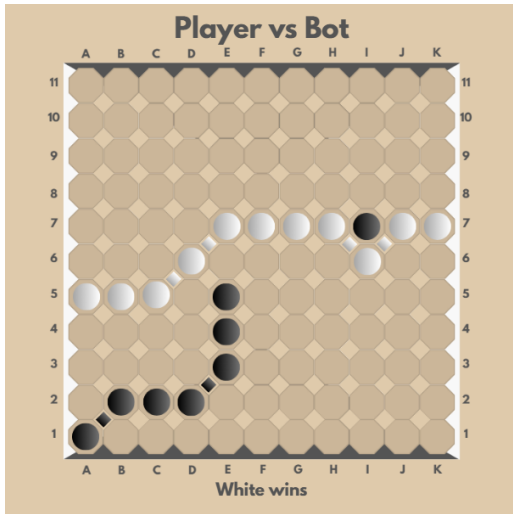

The goal of the game is to create a continuous path from one side of the board to the other:

Black: Must create a vertical connection from the top side to the bottom side.

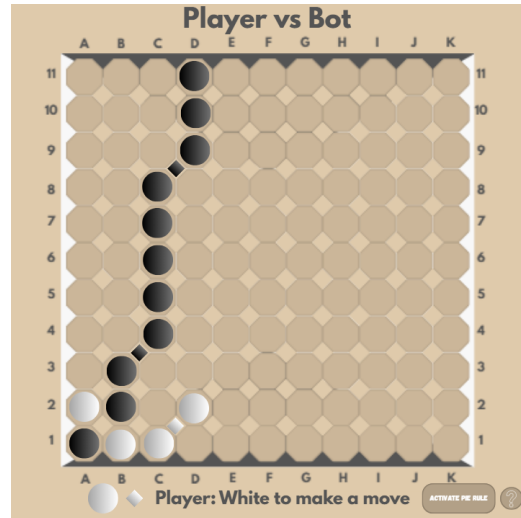

White: Must create a horizontal connection from the left side to the right side.

The game is designed so that no draws are possible.

There is a special rule called the Pie rule. What this does is it allows for the player of the second move (white) to choose whether to swap colours with black. The purpose of this is to even the playing field as the player with the first move is usually in advantage.

(a) A valid winning move 1

(b) A valid winning move 2
